

IAF52 FM Transmitter & Car Charger

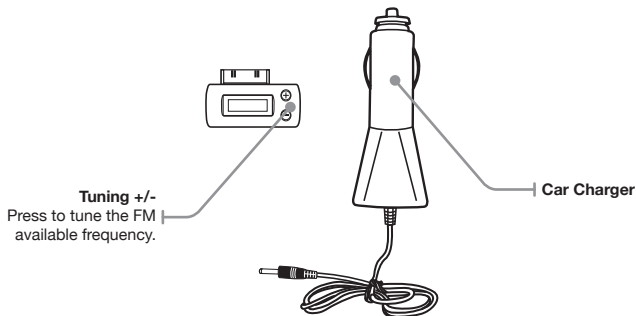

Introduction

Compatible with iPod, iPhone, and iPad.

It transmits high-fidelity audio from your iPod/iPhone/iPad to any FM radio receiver.

Includes

- Audio FM Transmitter
- Car Charger

Charging

Charges iPod, iPhone, and iPad when used with the car charger.

- Attach unit to car charger.
- LED will indicate charge.

Operating

The FM transmitter can be powered by iPod, iPhone, and iPad, or with the car charger.

- Plug the FM transmitter into your iPod/iPhone/iPad dock connector.
- LCD display will show the frequency.
- Adjust frequency to a suitable number which is not occupied by any other local FM channel or until it has no distortion. Click +/- button to change digital frequency. Frequency range is 76.0 -108.0.
- Adjust the frequency on your car or home audio sound system to match the frequency on the FM transmitter.
- Adjust the volume on your car or home audio sound system as desired.

Note: Stay within 5 feet of the audio system in order to receive a clear signal.

Troubleshooting

Static during music playback.

- Make sure the FM frequency channel on your car or home audio sound system matches the FM transmitter frequency channel.
- Check your FM frequency channel is a clear channel without the interference.
- Make sure your audio files are of good quality.
- If you are passing through a strong frequency area, such as train station or tunnel, this may cause interference.
- Make sure the transmitter is within 5 feet of the audio system.
